

## Press Release

### Aquarius to present its latest correlating sensors for leak detection and Pipe condition assessment at AWWA ACE19

[Aquarius Spectrum](#) is going to present its latest line of products for leak detection and pipe condition assessment during the upcoming [AWWA ACE19](#) water event in Denver, Colorado.

Aquarius' innovative correlating sensors are designed especially for water utilities in order to deal with underground hidden leaks and pipe bursts challenges.

To date, the **AQS-SYS** remote monitoring cloud system has been detected thousands of leaks on three continents and has enabled leading water utilities to save millions of dollars related to the operational and maintenance expenses of their infrastructure. This is in addition to the considerable savings in water and the reduction of water loss.

AQS-SYS is using permanent vibration and hydrophone sensors equipped with new-generation signal processing algorithms enables active monitoring of all pipe materials and sizes, using typically 3 sensors per mile of pipe. Equipped with 4G cellular communication modems and state-of-the-art synchronization modules, AQS-SYS performs highly accurate correlations.

Aquarius will be happy to invite you to its **booth (#4131)** to hear more about the easier solutions that will allow you to get rid of water loss and reduce NRW.

You will also be able to get a closer look at the world's most advanced mobile leak detection system that connects to your smartphone - **iQuarius™**.
