

Aquarius Spectrum is one of 62 Israeli innovative Companies in David Wanetick's book 'Solution Nation'

Aquarius Spectrum is proud to be featured as one of 62 emerging Israeli companies included in David Wanetick's 2018 book – "One Nation is Disproportionately Responding to the World's Most Intractable Problems" (<http://www.solutionnation.info>).

'Solution Nation' introduces Israeli companies that are having a global impact, developing solutions to problems that threaten to end life or materially degrade the quality of life. Aquarius Spectrum was chosen as one of the six Israeli companies that are developing innovative solutions for the water sector challenges.

Aquarius Spectrum is a leading provider of advanced leak detection solutions for water loss reduction, burst prevention and pipe condition assessment. Aquarius' products are currently monitoring more than 2,000 Miles of water pipes around the world helping major water utilities reduce their non-revenue water, maintenance and operations cost by using fixed and mobile acoustic sensors.

As noted in the book, "...According to the American Society of Civil Engineers, 7 billion gallons of water are lost to leakage every day in the United States. The World Bank reports that water leakages around the globe amount to 8.6 trillion gallons per year. In the United States, 24% of the water produced is non-revenue water – water lost by leakage, errant billing and theft. In other developed countries, non-revenue water is often between 40% and 50%."

Moreover, "...The more than 200,000 water line breaks that cost public water utilities approximately \$2.8 billion annually in the U.S. make preventing water leaks a priority. Correcting faulty water lines boosts water operators' revenues and reduces their energy costs. In many instances, patching leaks is a perfectly good alternative to replacing water pipes. It is certainly much less expensive. Payback on the early detection of small leaks is especially lucrative for water operators given that small holes become larger over time if not treated...".
